

Opération d'Intérêt National Bordeaux Euratlantique

Projet Bordeaux Saint Jean Belcier

Vers une durabilité Désirable...

Toward a desirable sustainability...

RESEAU DE CHALEUR

Territoire bas carbone à forte valeur ajoutée

Low carbon territory with high added value

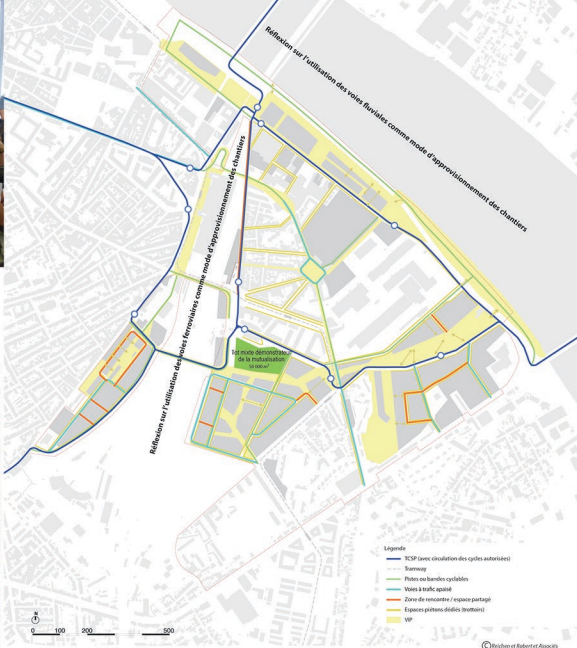

DENSITÉ POSITIVE

CONCERTATION

MOBILITÉ MUTUALISATION

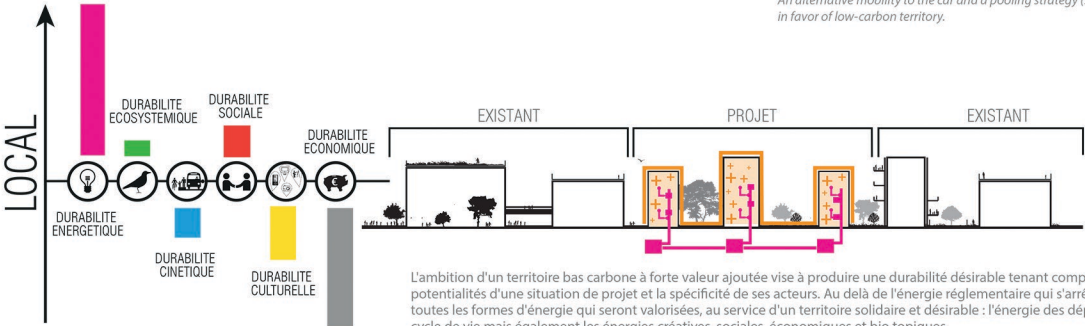

ÎLOT MIXTE MUTUALISÉ

Une mobilité alternative à la voiture et une stratégie de mutualisation (approvisionnement des chantiers, énergie, eau, déchets,...) au profit du territoire bas carbone.

An alternative mobility to the car and a pooling strategy (supply shipyards, energy, water, waste, ...) in favor of low-carbon territory.

Approche globale VS approche locale

The ambition of a low carbon territory aims to produce a desirable durability taking into account constraints and potentialities of a situation project and shareholder specificities. Beyond energy regulatory, the only relevant for building construction, it is all forms of energy that will be valued, for a united and desirable territory service : the mobility energy and the cycle but also the creative, social, economic and organic energies.
